

## Give your pet the gift of great breath and healthy teeth this year!

The American Veterinary Medical Association reports that periodontal disease is the most commonly diagnosed problem in dogs and cats. In fact, by the age of two, 80% of dogs and 70% of cats have some form of periodontal disease. This can lead to infections in the mouth that can spread throughout the body and even damage internal organs and become life-threatening. Early signs of dental problems can include bad breath, pain when chewing, and red, bleeding gums.

We are pleased to support pet dental health by participating in February National Pet Dental Health Month!

We are excited to incorporate new techniques from Doctor Bower contributing his expertise in the dental field. We have also had technician training with valley dental specialists that include innovative nerve/pain blocks and extraction methods.

Because dental health is so important, we are pleased to participate in February National Pet Dental Health Month! In support of this special month, we are offering a 20% discount on our dentals! Included in the discount is pre-operative bloodwork, IV catheter and fluids, extractions, and the dental cleaning\*.

This year we are scheduling dental consults before the surgery date to go over treatment options, perform bloodwork, and send home antibiotics. **The consult is complimentary provided that there are no other problems to be addressed or services needed** (i.e. vaccines, check ears, limping, etc). If there are other matters to take care of, the exam fee will apply.

Each pet receives a personalized report card to go home, and if you have an email address, we are also sending Before and After pictures of your pet's pearly whites!

Dental month is right around the corner, so call now to schedule a consult and reserve your spot!

\*Discount does not cover medications and cannot be combined with any other discount.
